- Do not directly vacuum with the front port of the main unit (So as not to wear the front port)
 - →Please use it with the nozzle
- Do not block the exhaust vent (This can cause deformation due to overheating)
- Do not operate for a long time if the suction inlet is blocked (To avoid deformation due to overheating)
- Do not arbitrarily fiddle with the charge terminal (To avoid bad contact)
- Do not use the vacuum cleaner in extremely hot or cold environments (as the rechargeable battery in it cannot work properly)

 →It is recommended to use the vacuum cleaner in the environment of 0 °C 40 °C (please charge it in 5 °C 35 °C)

To prevent overheating of the motor (Protection function)

If the vacuum cleaner continues running under the following conditions, the protection function will be activated, the main unit or suction nozzle will automatically stop running to prevent the motor from overheating and damage.

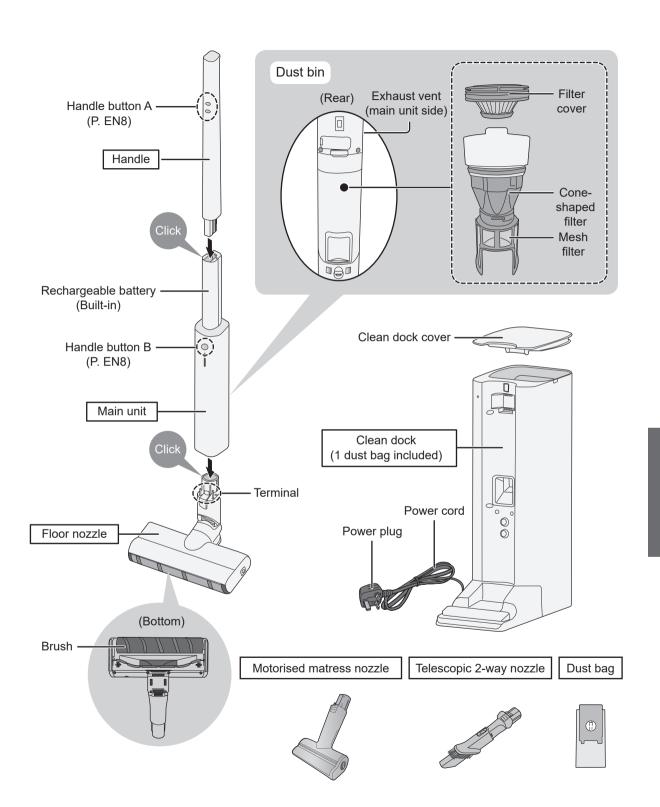

Main unit

- · When the dust bin is full of rubbish
- · When the filter cover and the cone-shaped filter are clogged
- · When the nozzle and suction inlet are clogged
- · When foreign objects are wound around the rotating brush

Clean dock

If the clean dock finishes 3 garbage collections within three minutes, then the clean dock will stop running to prevent overheating and damage to the motor.

Parts Names

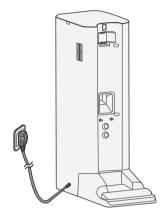

Charging

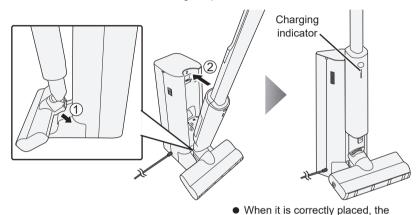

The battery is not fully charged at the time of purchase, so please be sure to charge before use

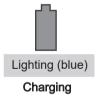

To help make the battery last longer

- If the vacuum cleaner is not used for more than 1 month, charge it fully. Unplug the power plug and store the cleaner. Charge it at least once in six months.
- To avoid affecting the battery life, when the vacuum cleaner stops automatically due to the exhausted battery during use, do not attempt to restart it or leave it alone to avoid over discharge.
 - →Make sure to charge it after use.
- Recharge in a room where the temperature is between 5 °C and 35 °C. (In order to charge correctly, avoid the use time to become shorter or charge time to become longer. The unit cannot charge properly if the room is too cold, or too hot such as when the room receives direct sunlight.)
- Please place the vacuum cleaner smoothly on the clean dock for charging.
- 1 The power plug is firmly plugged into the socket
- 2 As shown in the figure, place the main unit back to the clean dock

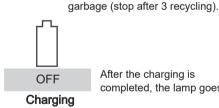

■ Charging indicator

The temperature of the battery changes depending on the service conditions such as ambient temperature and service time. When the battery temperature is too high, it will automatically wait until the temperature is suitable for charging, and then recharge, so the charging time will be longer.

completed

After the charging is completed, the lamp goes out.

charging indicator is lighting blue and the clean dock begins to collect

 Fast flashing (at an interval of approximately 0.15 second) indicates an abnormality. For details, please refer to "Troubleshooting" (P. EN15)

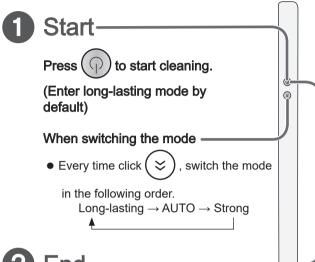

Note

- When the running vacuum cleaner is placed back to the clean dock, the main unit will stop running and enter charging mode, and the clean dock will begin to collect garbage.
- The vacuum cleaner does not work while it is in the charging state.
- The temperature of the main unit and the power cord will increase during charging, which is a normal phenomenon.

Request

- When used for the first time after purchase or left idling for more than 6 months, the battery may be reduced in capacity due to overdischarge.
 - →Make sure to recharge it before using it again
- If the vacuum cleaner is not used for a long time, unplug it and store it in a suitable place.
- In order to avoid interference with TV sets, telephones, etc. (such as noise), please keep more than 1 m away from these appliances when
- After the power plug is plugged in, 1 W is consumed even if the vacuum cleaner is not charged.
 - →When the vacuum cleaner is not in use for a long time, unplug the power plug to save power

Main unit

!WARNING

 Do not forcefully remove the main unit when the clean dock is recycling, to avoid damaging the main unit and the clean dock.

2 End

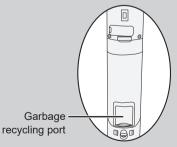

3 After cleaning

Place the main unit back to the clean dock. (P. EN6)

 When the main unit is placed back to the clean dock, the charging indicator is lighting blue and the clean dock will collect garbage automatically (stop after 3 recycling).

Tips

 When inhaling hair, pet hair, and large particles of garbage, there may be some residue at the garbage recycling port on the back of the main unit, perform maintenance if necessary.

- The clean dock may not be able to collect garbage if the dust bin is too full.
- When large particles of garbage are inhaled, some garbage may remain after the clean dock is recycled.

Clean dock

■ If the dust bag is full and the replacement is required, or if the dust bag is not filled, or if the dust bag is not in place ...

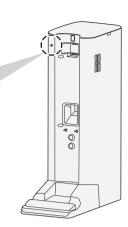

■ When the clean dock is abnormal ...

Flashing (red)

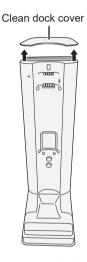

• Please refer to "Troubleshooting" (P. EN16)

If replacing the dust bag is required...

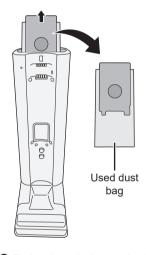

1 Open the clean dock cover.

3 Insert a new dust bag into the mounting slot.

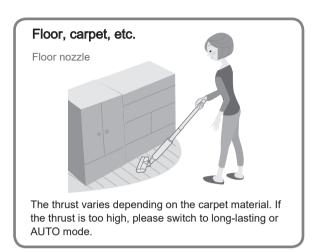

4 Fit the clean dock cover back, and it is ready for use.

Request

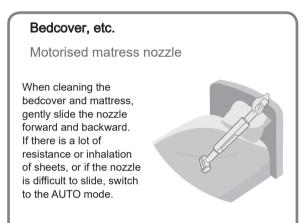

- Please insert the dust bag correctly to avoid affecting the effect of garbage collection.
- Dust bags are consumable, in order to ensure highquality cleaning effects, they should be replaced according to the type of garbage inhaled and the frequency of use.
- To purchase dust bag, please contact your original dealer.
